Woods Charter School in Chapel Hill, North Carolina

Recent News

Woods Charter School in Chapel Hill, North Carolina has upgraded all of its interior lighting.

The building was retrofitted with LED retrofit kits for ceiling-mounted fluorescent troffers and stairwell acrylic wrap fixtures. New LED high-bay fixtures replaced fluorescent high-bay fixtures in the gym.

RESULTS

The utility rebates for all three projects, which we filed on the customer's behalf, totaled \$18,400.

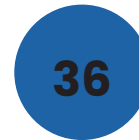

Improvements in lighting have resulted in a more welcoming learning environment. The energy and maintenance savings made the project worthwhile.

"We had three major goals to achieve as we considered a lighting upgrade for our school. We wanted to reduce the amount of energy our building used, save the school money overall, and improve the quality of light in our classrooms, offices, and common areas. The John Riley Group helped us meet all three goals, and they did so with a degree of professionalism, competency, and friendliness that was extraordinary."
